

# Development skills assessment

It was great meeting you during the interview, we would greatly appreciate you taking the time to complete this skills assessment at your earliest convenience.

Your deliverable will be a details interface that will display products using the mock API. The design template is provided in the design folder.

Requirements:

- You must use the mock API to fetch your data
- React
- Bootstrap
- Everything else is free game

The API folder contains the mock-API used for this test. Please do not make changes to these files.

All assets needed are included within the assets folder.

**Start the express server**

- Run npm install in the root of the project to get node packages
- Run node server.js in the root of the project to start the express server

### Mock API reference:

Endpoint: */product* returns an object with specific details for a product

```
{
  "ProductId": INT,
  "OS": STRING,
  "ScreenSize": STRING,
  "SIM": STRING,
